GRATING FURNITURE

Weland has developed a series of comfortable grating furniture for furnishing public places and places where the furniture is likely to be subject to rough treatment, for example parcs, underground stations etc.

The series comprise seats and „rest furniture“ (combination seats + table).

We also manufacture grating furniture of special design for internal and outdoor use. Contact us for special brochure and further information.

Grating Seat

Weland grating seat of steel for use on streets and market places, parcs, golf courses, lay-bys, camping sites etc. This seat has the best possible surface treatment. First of all the steel is hot dip galvanized and afterwards the furniture is painted in the required colour. This treatment means that even if the paint is worn or damaged the furniture will not rust.

Some advantages of **WELAND** grating furniture

- * Can be left outdoors year after year without rusting
- * The seat can be bolted to the ground
- * Best possible surface treatment
- * Strong construction, uninteresting target for vandalism.
- * No storing in wintertime required
- * Thanks to the very small areas exposed to the elements the seat and the back rests will dry very quickly after heavy rain
- * Strong and comfortable
- * Painted in required colour

Rest Furniture

Weland rest furniture of steel for restaurants, kiosks, lay-bys, camping sites, public baths, skiing installations etc. Rest furniture for outdoor use has the same excellent surface protection as the grating seat.

Rest furniture has the same excellent properties as described on page 40.

Length = 1305 mm Height = 730 mm Width = 1850 mm

Examples of other types of grating furniture

Contact us if you have own ideas or special requirements. Our grating furniture can be manufactured for use both indoors and outdoors and with painting in the required colour.

The raising hide shown above has a roof of corrugated sheet and cladding of felt.

Beat marking for safer hunt.

The Raising Hide that lasts a whole Hunter's Life

Weland raising hides are manufactured from cold-bended and hot dip galvanized steel profiles. Thus the hide will not rust and remains stable and safe year after year. The hide is offered in 4 standard heights: 1,0 - 2,0 - 2,85 - 3,75 metres. A rotating chair with bronze bearing is offered as an accessory.

Raising Hide,
height 3.750 mm.

Raising Hide,
height 2.850 mm.

Raising Hide,
height 2.000 mm.

Raising Hide,
height 1.000 mm.
