Product Catalogue

With extensive descriptions of the complete Weland aluminium balcony system.

Complete Balcony Systems

Balcony floors of aluminium, concrete or steel. Fixing components for all sorts of house front. Balustades and cladding in a variety of designs and colours.

„LIME“ Glazing System

An ingenious glazing system for balconies. The „LIME“-system facilitates complete opening av of glazed section. The „LIME“- system can also be applied to radius bent balcony balustrades.

Blind Type Gates

Manufactured from extruded aluminium slats. Every joint can be provided with a rod of stainless steel for obstructing opening by sawing. Weland Blind Type Gates are approved for meeting the requirements of AO7388 issued by STÖLDSKYDDSFÖRENINGEN (Swedish Theft Prevention Association). It corresponds to Type Gate RUS 200 issued by the insurance companies.

- FRAMEWORK TRUSSES
- GANGWAYS
- STEEL FRAMEWORK

Maku Stål AB has many years experience in the manufacture of framework trusses and steel structures. The methods of design and manufacture have been developed over a long period of years, and Maku operate today from recently constructed buildings incorporating up-to-date equipment for design and manufacture. This means that our products offer close tolerances, excellent fit and high quality, throughout.

Maku framework trusses are approved by the Building Supervisory Board (certificate no. 1808/88). Maku is also SBS-approved supplier of steel structures.

MAKU manufactures

- Parallell Framework Trusses
- Saddle Type Framework Trusses
- Reversed Saddle Type Framework Trusses
- Ridge Framework Trusses
- Special Framework Trusses

Arched Framework Trusses with free span width up to 60 metres (arched framework trusses with 90 m span width have been manufactured too). Maku's many years' experience and computer aided calculation programs guarantee for correct dimensioning.

For technical information ask for Maku's Dimensioning Manual.

Framework of Steel

Maku designs and manufactures complete framework of steel for not finalized buildings

◀ Gangways

Tube Support Bridges, Gangways and Driveways are manufactured with free span widths up to approx. 50 metres.

- LIFT FOR DISABLED PEOPLE

WELAND PLÅTAB

The Handicap Lift „Smålandslyften“ manufactured by Weland Plåt AB is an easily mounted and flexible handicap lift for residential houses and public buildings. This lift enables disabled people to pass entrances and move between different levels without any help from other people.

The handicap lift „Smålandslyften“ is an officially approved handicap lift and meets the requirements of the labour welfare act. As the lift is easily assembled and dismantled, it can quickly be removed and be installed somewhere else.

WELAND PLATAB

• HOT DIP GALVANIZING Wet Method

Z WELAND ZINKEN in Gothenburg

Zinken Weland in Gothenburg applies the wet process which means that the goods is brought directly from the pickling bath to the zinc bath. The fluxing agent forms a cover on the zinc bath and thus acts on the goods when this is being submerged. The galvanizing shop has large lifting height, and thus abundant zinc can run off, when the goods is lifted from the bath. Zinken Weland AB can galvanize goods up to 10 metres length.

Large lifting height facilitates good runoff from the goods

Distinct tagging facilitates identification after the galvanizing.

If the goods is covered with paint or varnish, this coating is removed by burnoff in an oven (Ø 2,0 x 9,5 m).

The goods is degreased by means of environment friendly tensides. It is then pickled in a couple of pickle baths before it is transferred to the zinc bath

Z WELAND ZINKEN

• HOT DIP GALVANIZING Dry Method

Z WELAND ZINKEN in Ulricehamn

Zinken Weland in Ulricehamn disposes of a completely new and up-to-date hot dip galvanizing plant started up in 1992. Here the so-called dry method is applied which means that the goods is submerged in a fluxing bath and then dried before being dipped in the zinc bath. The plant comprises two lines, one for normal goods and one for small parts. Both lines are computer controlled - the goods is not touched by human hand from loading to ready-galvanized.

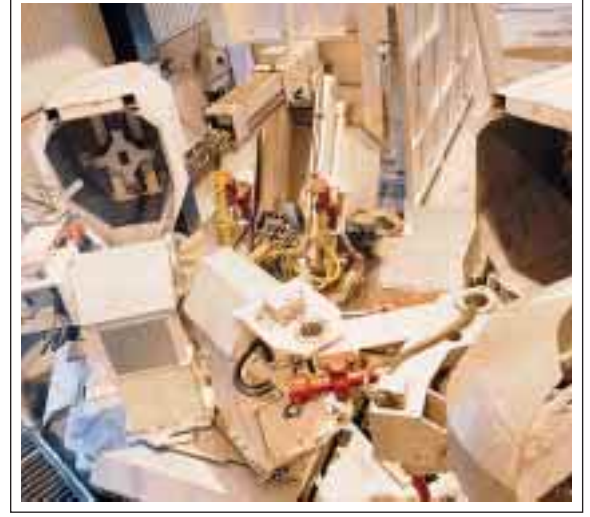

The galvanizing oven at Ulricehamn is computer controlled.

The goods is by hand suspended on special fixtures. From that moment the operation is computer controlled.

Zinken Weland's fully automatic galvanizing plant for small parts

After the galvanizing abundant zinc is removed in a centrifuge.
